The classlist package

Heiko Oberdiek*

2016/05/16 v1.5

Abstract

This package records the loaded classes and stores them in a list.

1 Documentation

1.1 Background

This packages is an answer of a newsgroup question:

Newsgroup:	comp.text.tex
Subject:	Finding the Document Class
From:	Herber Schulz
Date:	18 Jun 2005 13:16:49 -0500
Message-ID:	<herbs-D55DB9.13170418062005@news.isp.giganews.com>

*Please report any issues at https://github.com/ho-tex/oberdiek/issues

1.2 Usage

Load this package before `\documentclass`:

```
\RequirePackage{classlist}
\documentclass[some,options]{whatever}
```

It then records the classes with options.

If used after `\documentclass`, `\@filelist` is parsed for classes. The additional data specified options and requested version is no longer available here.

`\MainClassName` contains the first loaded class.

`\ClassList` stores the class entries, eg.

```
\ClassList → \ClassListEntry{myarticle}{a4paper}{}
             \ClassListEntry{article}{}{}
```

`\ClassListEntry` has three arguments:

- `#1`: class name
- `#2`: options given in `\documentclass`/`\LoadClass`
- `#3`: requested version, not the version of class

`\PrintClassList` prints the list on screen it can be configured by

`\PrintClassListTitle` for the title and

`\PrintClassListEntry` for formatting the entries. See the implementation for how to use these.

2 Implementation

1 ⟨*package⟩

Package identification.

```
2 \NeedsTeXFormat{LaTeX2e}
3 \ProvidesPackage{classlist}%
4   [2016/05/16 v1.5 Record classes used in a document (HO)]
5 \let\ClassList\@empty
6 \let\MainClassName\relax
```

Test, whether we are called before `\documentclass`.

```
7 \ifx\@classoptionslist\relax
8   \let\CL@org@fileswith@pti@ns\@fileswith@pti@ns
9   \def\@fileswith@pti@ns#1[#2]#3[#4]{%
```

`#1`: `\@clsextension`
`#2`: options of `\documentclass`/`\LoadClass`
`#3`: class name
`#4`: requested version

```
10    \ifx#1\@clsextension
11      \@ifl@aded#1{#3}{%
12        \PackageInfo{classlist}{%
13          Skipping class ‘#3’, because\MessageBreak
14          this class is already loaded%
15        }%
16      }{%
17        \@ifundefined{MainClassName}{%
18          \def\MainClassName{#3}%
19        }{}%
20        \@temptokena\expandafter{%
21          \ClassList
22          \ClassListEntry{#3}{#2}{#4}%
23        }%
```

```
        \edef\ClassList{\the\@temptokena}%
      }%
    \fi
    \CL@org@fileswith@pti@ns{#1}[{#2}]{#3}[{#4}]%
  }%
  \let\@@fileswith@pti@ns\@fileswith@pti@ns
\else
```

Called after `\documentclass`.

```
  \PackageInfo{classlist}{Use \string\@filelist\space method}%

  \let\ClassListEntry\relax
  \expandafter\def\expandafter\CL@test
      \expandafter#\expandafter1\@clsextension#2\@nil{%
    \ifx\\#2\\%
```

Name does not contain `\@clsextension`

```
    \else
      \expandafter\CL@test@i\CL@entry\@nil
    \fi
  }%
  \expandafter\def\expandafter\CL@test@i
      \expandafter#\expandafter1\@clsextension#2\@nil{%
    \ifx\\#2\\%
      \@ifundefined{opt@\CL@entry}{%
      }{%
        \@ifundefined{MainClassName}{%
          \let\MainClassName\CL@entry
        }{%
        }%
        \edef\ClassList{%
          \ClassList
          \ClassListEntry{\CL@entry}{}{}%
        }%
      }%
    \else
```

Names with more than one `\@clsextension` are not supported.

```
    \fi
  }%
  \@for\CL@entry:=\@filelist\do{%
    \expandafter\expandafter\expandafter\CL@test\expandafter
        \CL@entry\@clsextension\@nil
  }%
\fi
```

`\PrintClassListEntry`

```
\providecommand*{\PrintClassListEntry}[3]{%
  \toks@{* #1}%
  \typeout{\the\toks@}%
}
```

`\PrintClassListTitle`

```
\providecommand*{\PrintClassListTitle}{%
  \typeout{Class list:}%
}
```

`\PrintClassList`

```
\providecommand*{\PrintClassList}{%
  \begingroup
    \let\ClassListEntry\PrintClassListEntry
    \PrintClassListTitle
    \ClassList
  \endgroup
}
```

\CL@InfoEntry

```
\def\CL@InfoEntry#1#2#3{%
  \advance\count@ by \@ne
  \def\x{#2}%
  \@onelevel@sanitize\x
  \edef\CL@Info{%
    \CL@Info
    \noexpand\MessageBreak
    (\the\count@) %
    #1 [\x]%
    \ifx\\#3\\%
    \else
      \space[#3]% hash-ok
    \fi
  }%
}
\AtBeginDocument{%
  \begingroup
    \count@=\z@
    \def\CL@Info{Class List:}%
    \let\ClassListEntry\CL@InfoEntry
    \ClassList
    \let\on@line\@empty
    \PackageInfo{classlist}{\CL@Info}%
  \endgroup
}
```

⟨/package⟩

3 Installation

3.1 Download

Package. This package is available on CTAN[1]:

CTAN:macros/latex/contrib/oberdiek/classlist.dtx The source file.

CTAN:macros/latex/contrib/oberdiek/classlist.pdf Documentation.

Bundle. All the packages of the bundle 'oberdiek' are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

CTAN:install/macros/latex/contrib/oberdiek.tds.zip

TDS refers to the standard "A Directory Structure for TEX Files" (CTAN:pkg/tds). Directories with `texmf` in their name are usually organized this way.

3.2 Bundle installation

Unpacking. Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

3.3 Package installation

Unpacking. The `.dtx` file is a self-extracting docstrip archive. The files are extracted by running the `.dtx` through plain TEX:

```
tex classlist.dtx
```

[1] CTAN:pkg/classlist

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

```
classlist.sty → tex/latex/oberdiek/classlist.sty
classlist.pdf → doc/latex/oberdiek/classlist.pdf
classlist.dtx → source/latex/oberdiek/classlist.dtx
```

If you have a `docstrip.cfg` that configures and enables docstrip's TDS installing feature, then some files can already be in the right place, see the documentation of docstrip.

3.4 Refresh file name databases

If your TEX distribution (TEX Live, MiKTEX, ...) relies on file name databases, you must refresh these. For example, TEX Live users run `texhash` or `mktexlsr`.

3.5 Some details for the interested

Unpacking with LATEX. The `.dtx` chooses its action depending on the format:

plain TEX: Run docstrip and extract the files.

LATEX: Generate the documentation.

If you insist on using LATEX for docstrip (really, docstrip does not need LATEX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{classlist.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfLATEX:

```
pdflatex classlist.dtx
makeindex -s gind.ist classlist.idx
pdflatex classlist.dtx
makeindex -s gind.ist classlist.idx
pdflatex classlist.dtx
```

4 History

[2005/06/19 v1.0]

- First published version: CTAN and newsgroup comp.text.tex: "Re: Finding the Document Class"[2]

[2005/06/19 v1.1]

- After `\documentclass` the package looks at `\@filelist` instead of aborting with error.

[2] Url: https://groups.google.com/group/comp.text.tex/msg/8ee9523c2dc13666

[2006/02/20 v1.2]

- DTX framework.
- Fix for `\@@fileswith@pti@ns`.

[2008/08/11 v1.3]

- Code is not changed.
- URLs updated.

[2011/10/17 v1.4]

- Documentation fix: `\MainClass` → `\MainClassName`.

[2016/05/16 v1.5]

- Documentation updates.
